Quick Start Guide

Espresso grinder E65S GbW Unpack & position the grinder Insert the portafilter | Program the portafilter for PFD function Insert the bean container Grinding starts automatically when the portafilter is fully inserted! **GbW** (*Grind by Weight*): As soon as the correct amount of ground coffee (g) is in the portafilter, the grinding stops. Preset recipes (factory setting): 2. Don't Touch Single Shot | Double Shot | Manual grinding (Barista mode) | touch! here! Portafilter Detection (PFD function). 3. \ominus **PFD** (*Portafilter-Detection*): The grinder recognises programmed portafilters by their weight and automatically doses the recipe stored for the respective portafilter. New/unknown portafilters must first be recorded (=programmed) via the operating menu of the grinder. Set the grinding degree Set the coffee flow fine Surface: level, non-slip, dry & sufficiently stable coarse Adjust the portafilter support Load beans & switch on grinder

against the portafilter support! Too much latera pressure will affect the function of the load cell.

ht for calibration is an optional

Grinding degree lock:

= open

= locked

The weight for calibration is an optional accessory (article number 703000).

DDD (*Disc Distance Detection*): The grinding degree is deter-

mined by the distance between

→Go to: *Main menu* | *Service* | *Load cell calibrate*

→Confirm *remove Portafilter and press Jogdial*

 \rightarrow Follow the instructions on the display.

the grinding discs - it can be read and

Calibrate the load cell (as required)

stored in the display.

message.
